

Sales Performance Dashboard

Microsoft Excel • Self-Developed Data Analytics Project

1. Project Overview

This project is an interactive Sales Performance Dashboard developed in Microsoft Excel to transform structured sales data into a clear management reporting interface. The dashboard enables users to explore sales performance across time, regions, product categories, sales channels, customer types and products.

2. Project Objective

- Create a clear and interactive sales reporting dashboard in Excel.
- Transform detailed sales data into useful KPIs and visual insights.
- Enable quick filtering and comparison using Slicers and Timeline controls.
- Demonstrate practical Excel skills in data analysis, reporting and dashboard design.

3. Tools & Excel Features Used

Feature	Purpose
Microsoft Excel	Dashboard development and data analysis
PivotTables	Aggregation and analysis of sales data
Slicers	Interactive filtering by Region, Product Category, Customer Type and Sales Channel
Timeline	Interactive date-based analysis
Charts	Trend, regional, category, channel and product visualizations
Excel Formulas	Dynamic calculations and reporting elements

4. Dashboard Features

KPI Cards: Total Revenue, Total Orders, Quantity Sold and Average Order.

Monthly Trend: Revenue trend analysis by month.

Regional Analysis: Revenue comparison across Central, East, North, South and West.

Product Category Analysis: Revenue analysis by product category.

Sales Channel Analysis: Revenue distribution across Corporate Sales, Marketplace, Online and Retail Store.

Top 5 Products: Ranking of the top 5 products by revenue.

Interactive Filters: Filtering through Region, Product Category, Customer Type and Sales Channel.

Date Analysis: Timeline controls for year, quarter, month and day-level filtering.

Last Updated: Dynamic display of the latest data date.

5. Workbook Structure

Sheet	Purpose
Dashboard	Main interactive sales reporting dashboard.
pivot_table	Pivot-based calculations and supporting analysis used by the dashboard.
Sales_Data	Underlying sales transaction dataset.

6. Dataset

The dashboard is designed around sales data covering the financial year **1 April 2026 to 31 March 2027**. The dataset supports analysis across region, sales channel, customer type, product category, product and salesperson.

7. How to Use the Dashboard

- Open the workbook in Microsoft Excel.
- Use the Region, Product Category, Customer Type and Sales Channel slicers to filter the dashboard.
- Use the Timeline to select a year, quarter, month or date range.
- Review the KPI cards and charts to understand filtered sales performance.
- Use the Last Updated indicator to identify the latest date represented in the data.

8. Skills Demonstrated

Excel Dashboard Design • Data Analysis • PivotTables • Slicers • Timelines • Data Visualization • KPI Reporting • Dynamic Formulas • Management Reporting

9. Project Note

This is a self-developed portfolio project created to demonstrate practical Excel and business-data analysis skills. It is intended for learning, portfolio and demonstration purposes.
